Role/Position

UI/UX Designer - Group Project

Publication Link<https://ngegabut.com/>**Artwork/Project Description**

A mobile quiz-and-reward platform where users earn prizes through daily mini-game challenges. I led a full UI/UX overhaul across the app's event features and game flows, directly contributing to 10K+ new user sign-ups. I also redesigned the public-facing landing pages and integrated an SEO-driven blog to boost organic traffic. Through this, I aligned design decisions with business metrics like retention and DAU, while shipping fast iterations in a live product used by thousands of daily active players.

Artwork/Project Description

A serialized drama comic published on LINE Webtoon Indonesia, growing to a massive readership with over 13.4M+ total reads, 270K+ favorites, and a 9.76/10 audience rating. I co-developed story arcs, wrote scripts and dialogue, and handled consistent base colouring across 60 episodes and 2 seasons. This role required developing exceptional time management skills to meet strict weekly deadlines and maintain visual quality throughout the 2-year production cycle.

Artwork/Project Description

A casual simulation game where players run their own Indonesian street-food stall, reaching 80K+ downloads on Google Play. I designed the in-game HUD, main menu flow, shop interface (optimized for one-handed mobile play), and created character sprites, food illustrations, and environment assets. I learned how to translate complex simulation mechanics into a clean UI and the importance of culturally authentic art direction to connect with local audiences.

Game Portal Web**Year Accomplished**
Ongoing (2024 - Present)**Role/Position**
Game Developer - Group Project**Publication Link**
*In Development***Artwork/Project Description**

An integrated web portal designed to let players access and play games online quickly and seamlessly. In this active team project, I serve as the core Game Developer, solo-producing art and code assets from initial planning to full code execution. I designed and supplied custom games, and successfully integrated database connections from independent game clients to the portal's central system for real-time progress tracking.
