

Artwork/Project Title**Bos Gabut****Year Accomplished**

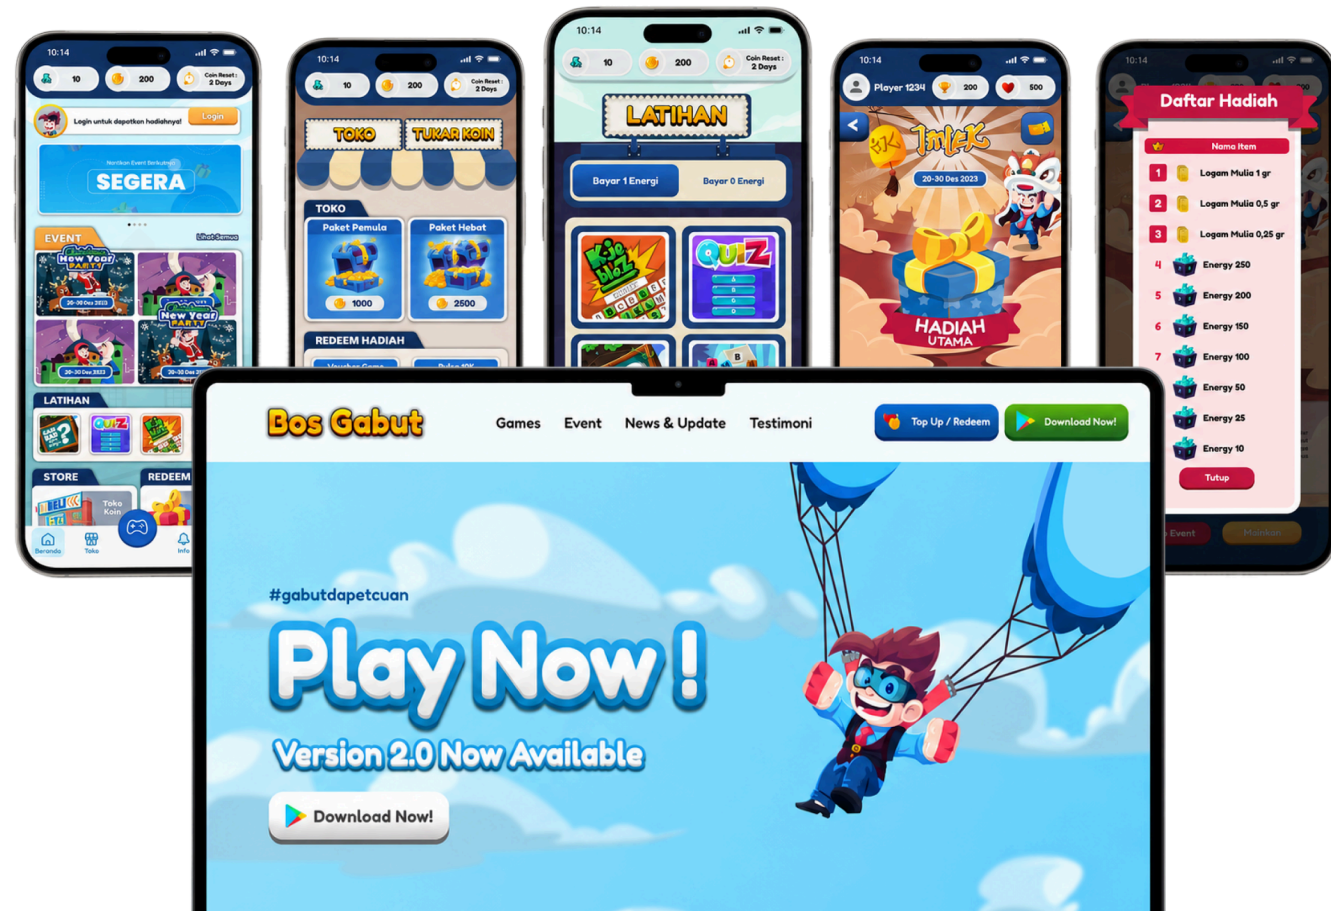

2023 - Present

Role/Position

UI/UX Designer - Group Project

Publication Link<https://ngegabut.com/>**Artwork/Project Description**

In this project, I worked on improving Bos Gabut as a mobile quiz-and-reward platform where users can earn prizes through daily mini-game challenges. My main responsibility was leading the UI/UX overhaul for the event features and game flows, so the experience felt clearer, faster, and more engaging for daily users. I also redesigned the landing pages and added an SEO-driven blog to support organic growth. This project helped me connect design decisions with product goals such as retention, DAU, and user sign-ups while shipping iterations in a live product environment.

Artwork/Project Title**Moon Flower (Webtoon)****Year Accomplished**

2020 - 2022

Role/Position

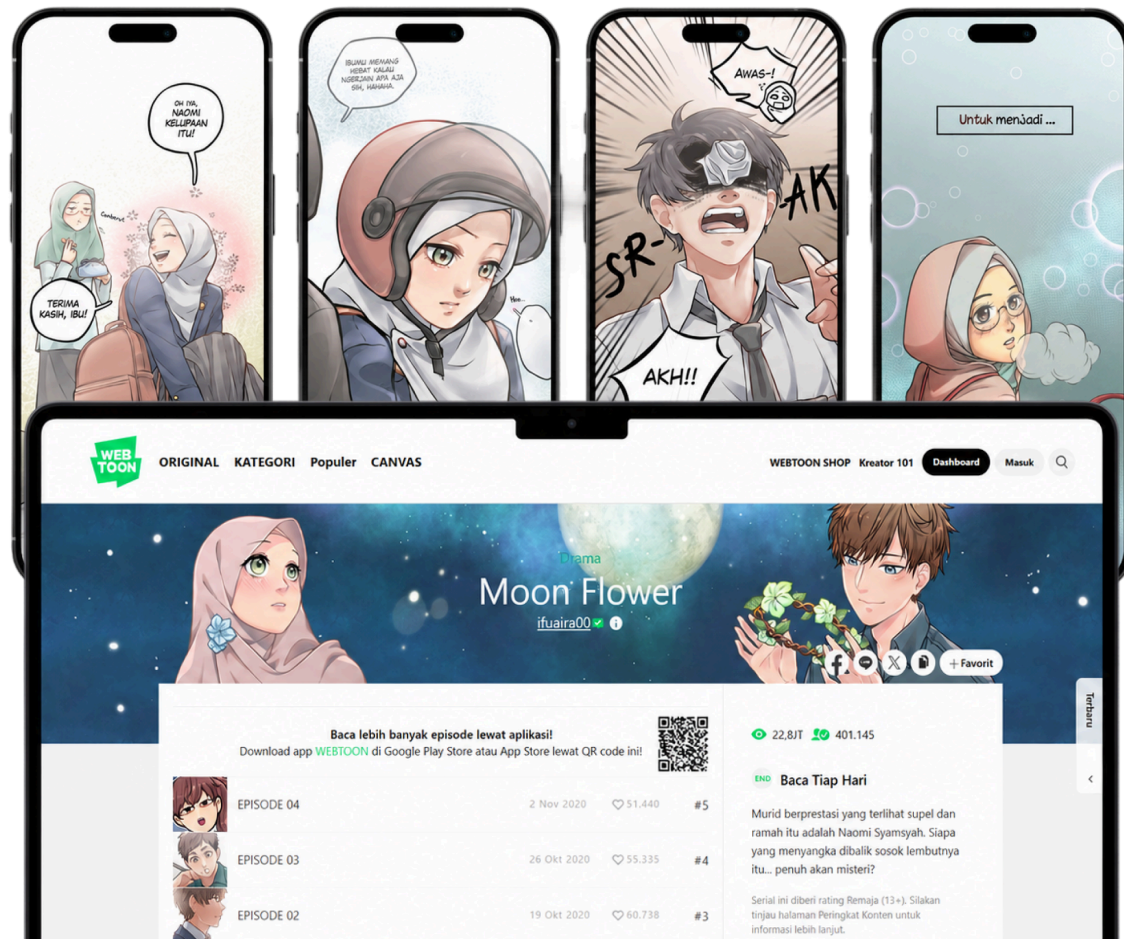

Story Writer & Base Colour Artist - Group Project

Publication Link

https://www.webtoons.com/id/drama/moon-flower/list?title_no=2261

Artwork/Project Description

Moon Flower was one of the projects that taught me a lot about long-term creative discipline. As part of the team, I helped develop the story arcs, write scripts and dialogue, and maintain consistent base colouring across 60 episodes and 2 seasons. The comic was published on LINE Webtoon Indonesia and reached more than 13.4M reads, 270K favorites, and a 9.76/10 rating. Working on a weekly release schedule pushed me to manage time carefully, communicate clearly with the team, and keep the visual quality consistent over a two-year production cycle.

Artwork/Project Title**Mie Ayam Simulator****Year Accomplished**

2023

Role/Position

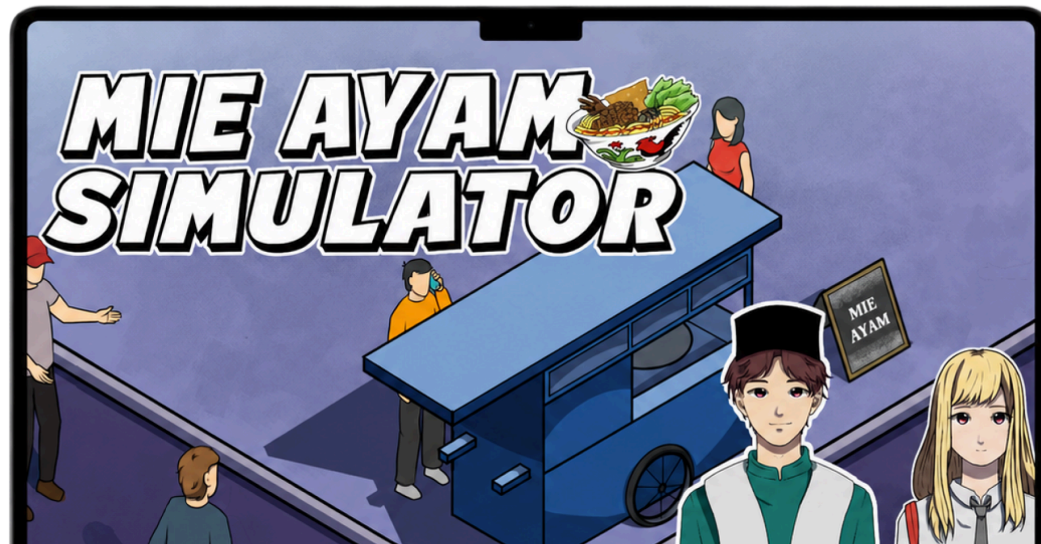

2D Artist & UI/UX Designer - Group Project

Publication Link

<https://play.google.com/store/apps/details?id=com.EverStudio.MieAyamSimulator>

Artwork/Project Description

For Mie Ayam Simulator, I helped shape both the visual identity and the player interface for a casual simulation game about running an Indonesian street-food stall. I designed the in-game HUD, main menu flow, and shop interface with one-handed mobile play in mind, while also creating character sprites, food illustrations, and environment assets. Since the game reached more than 80K downloads on Google Play, I learned how important it is to make the interface easy to understand while keeping the art direction culturally familiar and appealing to local players.

Artwork/Project Title**Game Portal Web****Year Accomplished**

Ongoing (2024 - Present)

Role/Position

Game Developer - Group Project

Publication Link

In Development

Artwork/Project Description

This ongoing project is a web portal that allows players to access and play games online more easily from one place. My role is focused on game development, where I create both the art and code assets from planning until implementation. I also design and build custom games for the platform, then connect each game client to the portal's central database so player progress can be tracked in real time. Through this project, I am learning how to balance creative game design with technical integration inside a larger system.
